

ARPITA PATNAIK

+91 9337013957 | arpitapatnaik1367@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

OBJECTIVE

Fast-learning Data Science student skilled in Python, SQL, and Machine Learning with strong analytical and data visualization abilities. Eager to apply statistical knowledge to real-world IT challenges.

EDUCATION

Silicon University
Bachelors of Technology in Computer Engineering and Networking
CGPA - 8.2/10

2023-2027

Bhubaneswar, Odisha

PROJECTS

1. Mental Health Risk & Support Analyzer (Python, scikit-learn, Pandas, XGBoost) - [Link](#)

- Built a classification pipeline using Scikit-learn to predict an employee's need for mental health treatment based on survey data, achieving 82.3% ROC AUC.
- Performed robust preprocessing (ColumnTransformer, TF-IDF), model benchmarking (Random Forest, XGBoost), and hyperparameter tuning (RandomizedSearchCV).
- Used Python (Pandas, Scikit-learn) to identify key predictive factors like family_history and work_interfere influencing treatment decisions.
- Provided insights into employee wellness, supporting data-driven HR and support program applications in the tech industry.

2. Power BI Dashboard – Amazon Global Sales Analysis

- Developed an interactive dashboard using Power BI, DAX, and Excel to visualize Amazon's global sales (2012–2015).
- Analyzed key metrics: sales projections, segment-wise revenue, regional performance, and profitability.
- Implemented dynamic filters, slicers, and map visuals for drill-down insights and user-friendly exploration.
- Enhanced decision-making with clean visual storytelling, consistent design, and performance KPIs.

3. LC50 Fish Toxicity Prediction – Machine Learning Mini Project - [Link](#)

- Built a regression model using Scikit-learn to predict LC50 [-LOG(mol/L)] toxicity for fish based on molecular descriptors.
- Performed data preprocessing, exploratory data analysis, feature selection, and model evaluation.
- Used Python (Pandas, NumPy) to identify key molecular traits influencing toxicity levels.
- Helped understand the impact of chemicals on aquatic life, supporting research applications.

SKILLS

Programming & Data Handling: Python, SQL, Pandas, NumPy, Scikit-learn

Data Visualization: Power BI, Matplotlib, Seaborn

Machine Learning & Statistics: Supervised & Unsupervised Learning, Model Evaluation, Feature Selection, Statistical Analysis, Probability, EDA

Database & Querying: Advanced SQL, Data Cleaning, Data Preprocessing

Tools & Technologies: Google Colab, Jupyter Notebook, Git, Angular (for frontend data apps), HTML/CSS

CERTIFICATIONS

- Completed **Power BI** course via **Simplilearn SkillUp (June 2025)**, covering DAX, data modelling, and dashboard visualization
- Completed internship program on **Data Science, ML & Deep Learning using Python** by **Syllogistek Systems Pvt. Ltd. (June–July 2024)**

ACHIEVEMENTS

- Ranked 7th globally in Code Olympics Season 1 (2021) organized by CodeYoung.
- Participated in an Ideathon conducted by Silicon University. Presented "SafeKey Emergency Alarm Keychain" with my team.
